# CASE NARRATIVE

## Woods Hole Group Environmental Laboratories

ETR: 45058  
Project: Raytheon

All analyses were performed according to Woods Hole Group's documented Standard Operating Procedures (SOPs), within holding time and with appropriate quality control measures except where noted. Blank correction of results is not performed in the laboratory for any parameter. Soil/sediment samples are reported on a dry weight basis unless otherwise noted.

### *Metals*

Samples associated with this data package were filtered through 0.45 $\mu\text{m}$  pore size membrane filters upon receipt at the laboratory. Results are reported for dissolved metals analyzed by ICP MS (Method 6020). Hardness was determined by calculation on a digested portion of the total sample.

Sample OF-1 (laboratory ID 45058-01) was digested in duplicate with a high and low matrix spike, preparation blank and LCS. All instrument and batch QC results were within method acceptance criteria except the following:

1. Cadmium: The RPD between the sample result and the serial dilution result was 22.8% and higher than the 10% method acceptance limit. All results are flagged (E) to indicate this QC failure.
2. Calcium: The RPD between the sample result and the serial dilution result was 12.0% and higher than the 10% method acceptance limit. All results are flagged (E) to indicate this QC failure.
3. Lead: The RPD between the sample result and the serial dilution result was 46.4% and higher than the 10% method acceptance limit. All results are flagged (E) to indicate this QC failure.
4. Manganese: The RPD between the sample result and the serial dilution result was 91.3% and higher than the 10% method acceptance limit. All results are flagged (E) to indicate this QC failure.
5. Nickel: The RPD between the sample result and the serial dilution result was 24.4% and higher than the 10% method acceptance limit. All results are flagged (E) to indicate this QC failure.
6. Tin: Recovery of tin from the matrix spike sample was 128.5% and outside of the 75% - 125% method acceptance range indicating that reported results may be overestimated. All sample results were below the method detection limit and are flagged (N) to indicate this QC failure. The LCS recovery was within method acceptance limits.

The enclosed results of analyses are representative of the samples as received by the laboratory. Woods Hole Group makes no representations or certifications as to the method of sample collection, sample identification, or transporting/handling procedures used prior to the receipt of samples by Woods Hole Group. To the best of my knowledge, the information contained in this report is accurate and complete.

Inorganic Quality Control Summary

Parameter	sample ID	analysis date	blank (mg/L)	sample result (mg/L)	RPD of duplicates	MS conc added (mg/L)	%recovery matrix spike	LCS conc added (mg/L)	% recovery LCS	qualifier
DOC	45058-13	10/28/2000	<1.0	6.51	0.92	7.14	94	2.95	87	
Hex.Chrom	45034-13	10/27/2000	<0.005	0.11	0	0.4	91	0.0965	96	

Qualifiers & Notes:

LCS = Laboratory control standard

RPD = Relative percent difference

B = Reported QC is for associated batch

N = See narrative

A = Recovery is for method standard in place of matrix spike.
