Groundwater Velocity Calculations

General

The MODFLOW grid used to simulate the pilot injections has 5 layers, consistent with those presented in Figure 4 of the RAM Plan. There are 93 rows, with row widths ranging from 44 ft at the upgradient boundary to 3.2 ft in the vicinity of the MW-33 pilot study area. There are 66 columns, with column widths ranging from 40 ft at the southeastern boundary to 4.4 ft in the vicinity of the MW-33 pilot study area.

The hydraulic conductivities per layer are as follows:

Layer	Approximate Thickness (ft)	K _h (cm/s)	K _v (cm/s)
1 (sand)	10	1 x 10 ⁻³	2 x 10 ⁻⁴
1 (sand)	10	1 x 10 ⁻³	2 x 10 ⁻⁴
2 (silt)	15	1 x 10 ⁻⁵	2 x 10 ⁻⁶
3 (sand)	8	6 x 10 ⁻²	1.2 x 10 ⁻²
4 (till/bedrock)	10	2 x 10 ⁻³	4 x 10 ⁻⁴

The only exceptions are a zone in the vicinity of MW-47 in layer 1, which has been assigned the higher conductivity of layer 3, and a smaller zone in the vicinity of the MW-33 pilot study area, which has a hydraulic conductivity of 2×10^{-2} cm/s and a K_h/K_v of 5, like all the other units.

The boundary conditions are a constant head boundary northwest of MW-43 (set at 125 ft) and a constant head boundary at the river (114 ft).

The injection took place at a rate of 250 gallons per hour, for 5 hours per day on October 6 and October 7.

Steady State Heads and Gradients

Steady state heads for key wells are shown below.

Well	Obs. Heads (feet)		Calc. Heads (feet)	Difference between Calculated and Observed (ft)	Squared Difference

MW-108	114.16	112.31	114.69	0.53	0.28
MW-107	114.52	114.89	114.69	-0.02	0.00
MW-37	117.33	118.73	119.21	1.18	1.39
Sum of Squared Differences					3.08

The discrepancies between measured and observed values are within the measurement error of the groundwater elevation measurements, as indicated by the difference between pre-injection and post-injection water levels.

The following table shows the ability of the model to predict observed hydraulic gradients. For the most part, MODFLOW was able to predict the observed head differences within 25%. The key exception is MW-111/MW-112, which appears to be in a lower-hydraulic conductivity zone than the other wells, since the gradient between this well couplet and all other wells is under predicted by the model.

Transient Heads

All of the wells screened in the upper sand, including MW-33S, showed a decrease in piezometric head on the order of 0.5 ft during the month following the permanganate injection. The injection increased the piezometric surface, measured two days after the injection, by 0.1 ft to 0.2 ft. The model was able to mimic this behavior for all wells.

Fluoride Tracer

The total porosity of the sand was set to 0.25, and the effective porosity for transport was set to 0.20. The calibrated MODFLOW flow system yielded an average groundwater flow velocity in the injection area of approximately 1 ft/d.

The fluoride tracer was injected using the “point source” option in MT3D. In this option, the concentration of the injected water is specified for each of the pumping periods. A fluoride concentration of 50 mg/L was used during the two injection periods. The average plume velocity during the 38-day period from the injection to the last groundwater samples is computed to be 0.7 ft/d.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at its own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at its own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at its own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at its own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

LIMITATION OF LIABILITIES

Alpha Analytical, Inc. performs services with reasonable care and diligence normal to the analytical testing laboratory industry. In the event of an error, the sole and exclusive responsibility of Alpha Analytical, Inc., shall be to re-perform the work at its own expense. In no event shall Alpha Analytical, Inc. be held liable for any incidental consequential or special damages, including but not limited to, damages in any way connected with the use of, interpretation of, information or analysis provided by Alpha Analytical, Inc.

We strongly urge our clients to comply with EPA protocol regarding sample volume, preservation, cooling, containers, sampling procedures, holding times and splitting of samples in the field.

Alpha Report L0109065:

Volatile Organics

It should be noted that one or more of the matrix spike/matrix spike duplicate percent recoveries as well as the relative percent difference on the matrix spike/matrix spike duplicate for the analysis of 8021 associated with Alpha Sample(s) L0109065-01 and -02 is invalid because the sample concentration is greater than four times the spike amount added.
